SUMMARY

Computer Engineering student and applied AI engineer focused on machine learning and deep learning. Build end-to-end AI systems in Python — CV parsing and recommendation (SBERT, two-tower, Transformers), LLM-driven course and content generation, and agent-based simulation — shipped as live products and a public Kaggle dataset, with national competition wins. Seeking an **AI Research & Solutions Engineer** role.

EDUCATION

University of Technology

BSc in Computer Engineering — GPA: 3.7 / 4.0

Relevant Coursework: Artificial Intelligence, Algorithms, Data Structures, Probability, Linear Algebra, Software Engineering.

Baghdad, Iraq

Sept 2023 – Present

EXPERIENCE

E-Learning & Recruitment Platform

AI Engineer & Business Analyst (Contract)

Remote / Baghdad, Iraq

June 2026 – Present

- Building the platform's AI features end-to-end: a CV builder, CV parsing with profile autofill, and job-description-based candidate-CV recommendation for HR users.
- Built an instructor course-generation tool that turns a topic into a full course — slide decks (PPTX), lesson content, and quizzes.
- Engineered a Telegram and LinkedIn job-aggregation pipeline that pulls live listings into the platform database.

Baly

Operations Officer

Baghdad, Iraq

June 2026 – Present

- Support day-to-day operations at one of Iraq's largest technology and ride-hailing platforms.

Computiq / HUB200

AI & Product Intern

Baghdad, Iraq

Feb 2026 – June 2026

- Developed AI features for the company's CV-maker product and supported AI workflows for course organization and internal automation.
- Structured, uploaded, and validated platform and course datasets to improve content readiness and operational accuracy.

PROJECTS

DeepWorld — Idea Spread Simulator [\[live demo\]](#)

2026

Solo Developer

- Built a live agent-based simulator where a user enters an idea or policy, selects a real country, and watches an AI-driven population adopt or reject it day by day.
- Combined LLMs with mathematical modeling to produce adoption, awareness, and sentiment dynamics, a live society feed, and a generated final report.

Quamus — AI Course Dataset & Recommendation System [\[code\]](#)

2025

Machine Learning

- Scraped, cleaned, and structured 40K+ online course entries from edX, Coursera, and Udemy, and published the result as a **public Kaggle dataset**.
- Built a recommendation system using SBERT embeddings and a two-tower TensorFlow model for course ranking.
- Designed a Transformer-based next-course recommendation pipeline for personalized learning-path prediction.

VibeHire — AI Recruitment & Candidate Evaluation Platform [\[live demo\]](#) [\[code\]](#)

2026

Founder

- Built an AI hiring platform that analyzes resumes, extracts skills, education, experience, and projects, and compares applicants for HR teams.
- Designed AI scoring workflows to evaluate applicants by technical ability, communication, and growth potential.

LEADERSHIP & AWARDS

- **2nd Place Across Iraq — Digital Summit Forum, Data Science Challenge (2026):** trained 5 machine learning models in 1.5 hours during a national data science competition.
- **1st Place — HUB200 Computiq Hackathon (2025):** built an AI-enhanced alternative to Google Forms with smarter form creation and data handling.
- **Finalist — Iraqi Youth Summit / Innovation Challenge, Ministry of Youth & Sports x UNICEF (2025):** presented at the national stage in Basra to stakeholders including Iraq's Minister of Youth and Sports.

SKILLS & CERTIFICATIONS

- **Programming:** Python, C++, Rust, Git/GitHub, Linux, Web Hosting, Data Scraping, Dataset Cleaning & Validation
- **AI/ML:** Machine Learning, Deep Learning, NLP, LLMs, Fine-Tuning, Recommendation Systems, Transformers
- **Libraries & Tools:** PyTorch, TensorFlow, scikit-learn, XGBoost, Pandas, NumPy, Hugging Face, OpenAI / GenAI
- **Languages:** Arabic (Native), English (Working Proficiency) • **Certification:** HCIA-AI
